

# Fundamentals of Laboratory Safety

## Do you know the basics of lab safety?

If your workplace has a laboratory on the premises there are specific OSHA regulations and safety protocols that you are required to follow.

### These include:

- PPE (Personal Protective Equipment)
- Respiratory Protection
- Medical Services and First Aid
- Airborne Contaminants
- Bloodborne Pathogens
- Hazard Communication
- Occupational Exposure to Hazardous Chemicals in Laboratories (29 CFR 1910.1450)

This unique and timely class is designed to cover the key points of lab safety.

### Topics Covered Include:

- Identifying hazards present in a lab such as biological and infectious agents
- Knowing proper use and storage of chemicals in your lab
- Proper Bio Safety Cabinet Protocol
- Regulatory guidelines on disposal of sharps
- Training and documentation required for work in a laboratory environment
- Specific Bloodborne Pathogen guidelines for labs
- PPE required in labs
- All requirements mandated in OSHA 1910.1450 covering Chemical Hygiene Plans

Attend this class to get the most up-to-date information on laboratory regulations and safety protocols and learn how to keep your employees safe!
